reader aware of the fact that both principal incarnations of Fourier theory, the Fourier series and the Fourier transform, are special cases of a more general theory arising in the context of locally compact abelian groups. The final goal of this book is to introduce the reader to the techniques used in harmonic analysis of noncommutative groups. These techniques are explained in the context of matrix groups as a principal example.

According to the International Association for Ambulatory Surgery (IAAS), ambulatory surgery should be defined as 'an operation/procedure, excluding an office or outpatient operation/procedure, where the

patient is discharged on the same working day'. The rise of ambulatory surgery has been driven by technological advances that reduce the need for overnight hospital stays, enhanced recovery programmes that advocate early mobilisation, and the need for economic efficiency. Recent experience has shown that redistributing surgical procedures from the inpatient setting to ambulatory centres can be done without impacting quality. The majority of people requiring urologic surgery are now treated as day/outpatients thus requiring a different level of care from inpatients. Ambulatory Urology and Urogynaecology is the only book that combines urology and urogynaecology focuses on outpatient management.
