## Chapter 3

Thank you very much for downloading **munkres topology solutions chapter 3**. Maybe you have knowledge that, people have look hundreds times for their favorite novels like this munkres topology solutions chapter 3, but end up in malicious downloads.

Rather than reading a good book with a cup of tea in the afternoon, instead they juggled with some malicious bugs inside their desktop computer.

Munkres Topology Solutions Chapter 3

Munkres - Topology - Chapter 3 Solutions

Section 24 Problem 24.3. Solution: Define  $g:$

$X \rightarrow \mathbb{R}$  where  $g(x) = f(x)$  if  $R(x) = f(x)$  where  $i$

$R$  is the identity function. Since  $f$  and  $i$  are

continuous,  $g$  is continuous by Theorems

18.2(e) and 21.5. Since  $X$  is connected for all

three possibilities given in this

by poring over the definitions, theorems, and examples that are worked out in the text. One must work part of it out for oneself. To provide that opportunity is the purpose of the exercises. James R. Munkres. (a) The topology is strictly finer than the standard topology on which is compact and Hausdorff, therefore, it is not compact.

following J. R ...

$\tau$  is a topology on  $X$ . This topology is called the countable complement topology. Lemma 3. The compact subspaces of  $X$  are exactly the finite subspaces. Proof. Suppose  $A$  is infinite. Let  $B = \{b_1, b_2, \dots\}$  be a countable subset of  $A$ . Set  $A_n = (X - B) \cup \{b_1, \dots, b_n\}$ . Note that  $\{A_n\}$  is an open covering of  $A$  with no finite subcovering.

1st December 2004. Munkres §35. Ex. 35.3. Let  $X$  be a metrizable topological space. (i)  $\Rightarrow$  (ii): (We prove the contrapositive.) Let  $d$  be any metric on  $X$  and  $\phi: X \rightarrow \mathbb{R}$  be an unbounded real-valued function on  $X$ . Then  $d(x, y) + |\phi(x) - \phi(y)|$  is an unbounded metric on  $X$  that induces the same topology as  $d$  since  $B. d.$

Suppose that for each  $x \in A$  there is an open set  $U$  containing  $x$  such that  $U \cap A = \emptyset$ . Show that  $A$  is open in  $X$ . Solution: Let  $\mathcal{C} \subseteq \mathcal{A}$  the collection of open sets  $U$  where  $x \in U \cap A = \emptyset$  for some  $x \in A$ . Suppose  $U \cap A = \emptyset = \bigcup_{U \in \mathcal{C}} U \cap A = \bigcup_{U \in \mathcal{C}} \emptyset$ . Since  $X$  is a topological space ...
