WORD PROBLEMS ON RATIO AND PROPORTION. Problem 1 : The average age of three boys is 25 years and their ages are in the proportion 3 : 5 : 7. Find the age of the youngest boy. Solution : From the ratio 3 : 5 : 7, the ages of three boys are 3x, 5x and 7x. Average age of three boys = 25.  $(3x + 5x + 7x) / 3 = 25$ .  $15x = 75$ .

Word Problems on Ratio and Proportion - onlinemath4all

A proportion is a comparison of two ratios. If a : b = c : d, then a, b, c, d are said to be in proportion and written as a:b :: c:d or a/b = c/d. a, d are called the extremes and b, c are called the means. For a proportion a:b = c:d, product of means = product of extremes b\*c = a\*d. Let us take a look at some examples: Question:

Proportion word problems (practice) | Khan Academy

A proportion, which is an equation with a ratio on each side, states that two ratios are equal. In these worksheets, your students will solve word problems that involve finding ratios and proportions. Students will find values when given a ratio. They will compare two ratios to determine which is bigger.

Proportion Word Problems Worksheets

More Ratio Word Problems Algebra Lessons. Ratio problems are word problems that use ratios to relate the different items in the question. The main things to be aware about for ratio problems are: Change the quantities to the same unit if necessary. Write the items in the ratio as a fraction. Make sure that you have the same items in the numerator and denominator. Ratio Problems: Two-Term Ratios. Example 1:

Ratio Word Problems (video lessons, examples and solutions)

$160 \times T = 2 \times 3000$ .  $160 \times T = 6000$ . Divide 6000 by 160 to get T.  $6000 \div 160 = 37.5$ . T = 37.5 or 37 minutes and 30 seconds. I welcome any questions about these proportion word problems if you have any. Height of boy / Length of shadow. = . Height of man / Length of shadow.
